Past performance does not guarantee future results. The above performance represents past performance and does not guarantee future results. Current performance may be lower or higher. Visit abfunds.com for comprehensive performance information. The investment return and principal value of an investment in the Portfolio will fluctuate, so that your shares, when redeemed, may be worth more or less than their original cost. Returns for other share classes will vary due to different charges and expenses. Performance assumes reinvestment of distributions and does not account for taxes. If applicable, high double-digit returns are highly unusual and cannot be sustained; such returns are primarily achieved during favorable market conditions. Advisor Class shares have no front-end or contingent deferred sales charges, however when purchased through a financial advisor, additional fees may apply.
Past performance does not guarantee future results. If applicable, this reflects the Adviser’s contractual waiver of a portion of its advisory fee and/or reimbursement of a portion of the Fund’s operating expenses. Absent reimbursements or waivers, performance would have been lower. Consult the prospectus for a detailed explanation of fees and expenses. Sharpe Ratio measures return relative to the investment risk taken. Effective Duration measures the sensitivity of a portfolio’s price to interest rate movements. Annual Portfolio Turnover measures how frequently securities are bought and sold. Standard Deviation measures dispersion of returns from its mean. Reflects the positive impact of proceeds related to class action settlements that were originated from individual fund holdings. Reflects a 0.02% increase in NAV on November 17, 2017 as a result of the Fund recording a receivable on its books and records in connection with the distribution by the JP Morgan Fair Fund. Holdings are expressed as a percentage of total investments and may vary over time. They are provided for informational purposes only and should not be deemed as a recommendation to buy or sell the securities mentioned. During normal conditions, the Fund expects that each category will contribute an equal amount to overall portfolio risk (where risk is defined as expected tail loss). Current market conditions may result in portfolio positioning that over- or underweights one security type relative to another. Fixed Income Contribution to Risk includes total nominal duration risk. Effective October 8, 2012 the Fund’s name and investment strategy changed. Therefore, the performance stated above was primarily achieved under the prior investment strategy of the Fund. Sources: FactSet, Morningstar Inc. and AB. The MSCI World Index (free float-adjusted market capitalization weighted) represents the equity market performance of developed markets. Net index reflects the reinvestment of dividends. MSCI makes no express or implied warranties or representations, and shall have no liability whatsoever with respect to any MSCI data contained herein. The MSCI data may not be further redistributed or used as a basis for other indices, any securities or financial products. This report is not approved, reviewed or produced by MSCI. Bloomberg Global Aggregate Bond Index represents the performance of the global investment-grade developed fixed-income markets. The 60% MSCI World / 40% Bloomberg Global Aggregate represents a blended performance barometer consisting of a mix of each Index as noted. Investors cannot invest directly in indices or averages, and their performance does not reflect fees and expenses or represent the performance of any AB fund. A WORD ABOUT RISK: Allocation Risk: Allocating to different types of assets may have a large impact on returns if one of these asset classes significantly underperforms the others. Below Investment Grade Securities Risk: Investments in fixed-income securities with lower ratings (commonly known as “junk bonds”) tend to have a higher probability that an issuer will default or fail to meet its payment obligations. Credit Risk: A bond's credit rating reflects the issuer’s ability to make timely payments of interest or principal—the lower the rating, the higher the risk of default. If the issuer’s financial strength deteriorates, the issuer’s rating may be lowered and the bond’s value may decline. Derivatives Risk: Investing in derivative instruments such as options, futures, forwards or swaps can be riskier than traditional investments, and may be more volatile, especially in a down market. Foreign (Non-US) Risk: Non-US securities may be more volatile because of political, regulatory, market and economic uncertainties associated with such securities. Fluctuations in currency exchange rates may negatively affect the value of the investment or reduce returns. These risks are magnified in emerging or developing markets. Interest Rate Risk: As interest rates rise, bond prices fall and vice versa—long-term securities tend to rise and fall more than short-term securities. Leverage Risk: Trying to enhance investment returns by borrowing money or using other leverage tools—magnify both gains and losses, resulting in greater volatility. Market Risk: The market values of the portfolio’s holdings rise and fall from day to day, so investments may lose value. Investors should consider the investment objectives, risks, charges and expenses of the Fund/Portfolio carefully before investing.
